-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Interference

1. Claims 37 and 40 are rejected under 35 U.S.C. 135(b)(1) as not being made prior to one year from the date on which U.S. Patent No. 5,988,598 was granted. See *In re McGrew*, 120 F.3d 1236, 1238, 43 USPQ2d 1632, 1635 (Fed. Cir. 1997) where the Court held that 35 U.S.C. 135(b) may be used as a basis for *ex parte* rejections.

It appears that the original claims as filed and the amendments to the claims filed prior to Nov 23, 2000 in the history of the prosecution of the present invention failed to include the same or substantially the same invention of the US Patent No. 5,988,598.

The US Patent No. 5,988,598 includes the subject matter of an upper post member, a lower post member, a connecting joint member connecting the upper and the lower post members with a first fastener and a second fastener, ***the first fastener having a first connector and a second connector, wherein the first fastener that connects the upper post member to the connecting joint member has a failure strength that is less than the failure strength of the second fastener, and wherein the first connector has a first failure strength that is greater than the second failure strength of the second connector*** so that when an impact is applied on the upper post member, the second connector fails to allow the upper post member to rotate about the first connector. (Emphasis added for indicating the subject matter that is not included in the present invention prior to Nov 23, 2000)

None of the original claims and the subsequent amended claims filed prior to Nov 23, 2000 includes the subject matter regarding a fastener, having two connectors, that connects the

Art Unit: 3682

upper post member and a mid-connecting member, wherein (1) the fastener is weaker than a fastener that connects the mid-connecting member to a lower post member and (2) each of the two connectors of the fastener has different failure strength from one another.
